DRAFT TPC Group Fire

Water

EPA conducted surface water sampling on November 30, 2019 at 4 sample locations. The surface water samples were collected along canals to the east and northwest of the site and will be analyzed for per- and polyfluoroalkyl substances (PFAS), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), chemical oxygen demand (COD), and oil & grease. The results from the sampling event will be compared to the TCEQ Surface Water Quality Standards (WQS), or to TCEQ Texas Risk Reduction Program surface water protective concentration levels (PCLs), if a WQS was not available for a chemical.

Internal work product – this is a draft document and will be finalized once the validated data is received
